Complaints Module

Implementation status report | 2 November 2026 | Branch: elm-module

STATUS	Complaint submission slice implemented.

Summary

The complaints module implements the assigned complaint-submission capability. A signed-in user can submit a category and description, optionally attach files, and receive a unique complaint reference and submission time. A confirmation email is queued for delivery.

Scope covered

Complaint intake requirements: category and description validation, submission timestamp, optional supporting attachments with configured constraints, a unique complaint identifier, and submission confirmation.

Implemented deliverables

Area	Implementation
Submission API	**POST /api/v1/complaints/** validates required fields and requires the complaints module grant and create permission.
Complaint record	Stores complainant IAM ID, category, description, submission time, and unique UUID reference.
Attachments	Accepts multipart uploads, streams files to private storage outside the repository, sanitizes names, and records size, content type, storage key, and SHA-256 digest. Type, size, and count constraints are configurable.
Confirmation email	Creates a notification record with the submission. A scheduled Celery task sends pending messages, retries failures, and recovers stale worker claims.
Portal integration	Adds the client form and route, module registration, navigation, and grants for student, faculty, and staff.
Project artifacts	Adds a database migration, permission manifest/catalogue entries, attachment configuration examples, import-layer rules, and module documentation.

Checks completed

Python compilation completed successfully. **git diff --check** completed successfully.

Scope note: this report covers complaint submission. Assignment, tracking, resolution/rejection, closure verification, reopening, feedback, escalation/SLA processing, announcements, reporting, and CMS role administration are outside this implementation slice.

Repository note: this report describes the current local changes on branch **elm-module**; no claim is made that they have been committed, merged, or deployed.
